

Category Intelligence — Insight Summary

Group 10: Mohammed Saalif Udyawar · Jakkana Hasini · Mohammed Mutee Ruknuddin

Calibo AI Academy Path 2 · KLU Batch · MUC01

107,836 transactions · 12 stores, 6 cities · 1 Jan – 30 Jun 2026 · ₹45.98 Cr revenue

Finding 1 — Electronics revenue fell 35% and accounts for the chain's decline

Electronics earns 49% of revenue, but its monthly revenue fell from **₹4.57 Cr to ₹2.97 Cr** — June was ₹1.60 Cr below January. The chain fell 18% (₹8.48 Cr → ₹6.93 Cr), while the other four categories together grew 1.3%. Electronics transactions fell 33% with average prices nearly flat (–2%); the data does not establish whether stock availability, competition, pricing or demand is the cause. **Mobile Phone fell the most: ₹98.0 L → ₹42.1 L (–57%).**

Finding 2 — Apparel is the growth category

Apparel revenue grew **34% (₹1.01 Cr → ₹1.35 Cr)** and recorded Apparel transactions increased 31%; customer and seasonal data are needed to explain the increase. All five Apparel products grew, led by T-Shirt (+45%) and Jeans (+40%). Grocery has the lowest coefficient of variation in monthly revenue (3.9%) and accounts for half of recorded transactions.

Finding 3 — Deeper discounts do not come with bigger baskets

Higher discounts are associated with lower revenue per transaction without a meaningful increase in units per transaction: **₹4,686 at full price vs ₹3,632 at 20% off (–22%)**, with about **2.6 units** at every level and the same pattern in every category. The chain recorded **₹3.56 Cr** of discounts in six months (₹1.76 Cr on Electronics). This supports challenging deeper discounts, but does not establish their effect on total demand or profit.

Recommendation to the Category Manager

- **Invest — Apparel:** more shelf space and stock depth; test weekday rather than weekend promotions.
- **Challenge — Electronics supplier:** open with Mobile Phones (–57%) and ask for an explanation of range, availability and pricing before renewing shelf space and promotional funding.
- **Discounts:** trial a 10% cap on store-funded discounts, with deeper discounts supplier-funded and tied to volume targets.
- **Watch / Hold:** watch Home & Kitchen (–18%); hold Grocery and Personal Care.

Limitation

The data has revenue but no product cost or margin, footfall, stock or competitor information, and covers only six months. It cannot show whether discounts attract extra customers, what caused the Electronics decline, how much of Apparel's growth is seasonal, or whether moving shelf space to Apparel would raise **profit**, not just revenue.

Who owned which section

Mohammed Saalif Udyawar (Data Analyst): CBIM Problem Canvas (with the team) and Steps 6.1–6.3 — data checks, category trends, and top and bottom products.

Jakkana Hasini (Insights Lead): Step 6.5 — day-of-week and monthly patterns.

Mohammed Mutee Ruknuddin (Business Synthesiser): Step 6.4 discount analysis, Step 6.6 Category Manager Briefing, and notebook integration.
