

Individual Reflection

Jakkana Hasini · Insights Lead · MUC01 Category Intelligence · Calibo AI Academy Path 2 · KLU Batch

As Insights Lead, I built Step 6.5: the day-of-week and monthly sales patterns, and the comparison between Apparel and the whole chain. I learned why comparisons must be fair — some weekdays appear more often than others and February is a shorter month, so I used averages per day. The most interesting finding was that Apparel follows the chain's weekly rhythm but grows overall despite a February dip. From Saalif's section, I learned how careful data checks give confidence in every number, and how a product's direction can matter more than its total. From Mutee's section, I learned how to turn findings into clear recommendations, and to be honest about what the data cannot show, such as whether promotions bring in extra customers. Next time, I would ask for last year's sales so that seasonal patterns could be checked.
