

Individual Reflection

Mohammed Mutee Ruknuddin · Business Synthesiser · MUC01 Category Intelligence · Calibo AI Academy Path 2 · KLU Batch

As Business Synthesiser, I built Step 6.4, the discount analysis, and Step 6.6, the Category Manager Briefing, and integrated the notebook, including the shared chart style. The discount work taught me to state conclusions precisely: higher discounts are associated with lower revenue per transaction without more units, which supports challenging deeper discounts but does not prove their effect on total demand or profit. From Saalif's section, I learned to look at direction, not just totals — the Mobile Phone finding became the centre of our briefing. From Hasini's section, I learned how simple timing patterns lead to a practical, testable recommendation: weekday promotions measured against control stores. Bringing three people's work together also showed me the value of one shared chart style and one set of wording rules, so the notebook reads as a single story. Next time, I would request margin data at the start.
