

Individual Reflection

Mohammed Saalif Udyawar · Data Analyst · MUC01 Category Intelligence · Calibo AI Academy
Path 2 · KLU Batch

As Data Analyst, I led the CBIM Problem Canvas with the team and built Steps 6.1 to 6.3: checking the data, the monthly category trends, and the top and bottom products. My main contribution was looking beyond totals — comparing transactions with prices showed that the Electronics fall came from fewer transactions rather than lower prices, and measuring each product's direction showed that Mobile Phone had fallen 57% even though it ranked third by total revenue. From Hasini's section, I learned that simple, fair averages by weekday can guide a practical decision such as when to test promotions. From Mutee's section, I learned to separate what the data shows from what it cannot prove — for example, presenting the 10% discount cap as a policy to test rather than a proven answer. Next time, I would ask for stock and competitor data early, so that the Electronics decline could be explained and not only measured.
